TACA – NEW JERSEY Chapter Website: www.tacanow.org/new-jersey

Autism is a devastating neurological and biological disorder typically diagnosed in children between the ages of 18 months to 5 years of age.

Autism affects each individual differently and at different levels of severity. Some individuals with autism are severely affected, cannot speak, require constant one on one care, and are never able to live on their own. While others are less severe, can communicate, and eventually acquire the necessary skills to live on their own. Typically autism affects individuals in four key areas:

- 1) communication--verbal and non verbal
- 2) social skills
- 3) behaviors
- 4) learning.

Talk About Curing Autism (TACA) provides information, resources, and support to families affected by autism. For families who have just received the autism diagnosis, TACA aims to speed up the cycle time from the autism diagnosis to effective treatments. TACA helps to strengthen the autism community by connecting families and the professionals who can help them, allowing them to share stories and information to help people with autism be the best they can be.
